# HIFU

FOR SAFELY LIFTING AND TIGHTENING THE FACE AND NECK

## WHAT IS HIFU?

High-intensity focused ultrasound (HIFU) face and neck lift is one of the most popular and effective non-surgical treatments for creating a facelift look without the need for invasive procedures. Ideal for mild to moderately lax skin, HIFU tightens, firms and lifts the skin with amazing results.

## HOW DOES IT WORK?

Collagen and elastin work together to create skin firmness and structure. As we age we become depleted of these vital proteins, causing the skin to wrinkle and become lax. HIFU stimulates the production of new collagen and elastin fibres by using focused ultrasound energy to heat the deep supportive layers of the skin. This process improves elasticity, creating a tighter, firmer and more lifted appearance. HIFU works on: skin tightening, wrinkle reduction, jowl lifting, brow lifting, neck lifting and tightening and enhancement of the jawline.

## WHAT RESULTS CAN I EXPECT FROM HIFU?

Reconditioning and renewing the skin from within makes HIFU a highly effective skin tightening treatment with clients reporting visible results in facial contouring and skin firmness, and a decrease in fine lines and wrinkles. Results are permanent though future touch ups after 12 months may be required to stay ahead of the ageing process. We recommend 3 x 75 minute treatments over a course of 9 months for optimum results.

## WHAT WILL I EXPERIENCE AT MY APPOINTMENT?

Ultrasound energy is delivered in short pulses via the HIFU device to the face and neck, targeting the deep layers of the skin. Many experience this as a light prickly sensation, but not painful. HIFU is a safe, non-invasive treatment, requiring no downtime.

HIFU, HIGH INTENSITY FOCUSED ULTRASOUND  
FACE AND NECK LIFTING TREATMENT.  
FOR EFFECTIVE SKIN TIGHTENING, LIFTING,  
REJUVENATION AND FIRMING.

## RESULTS

### LIFTS & DEFINES

Focused ultrasound energy safely lifts and tightens the face and neck by strengthening the structure of the skin from deep within.

### NON-SURGICAL

HIFU safely and painlessly penetrates the layers of the skin without damaging the upper layers to deliver amazing results without incisions, scarring or risks involved.

### RECONDITION & RENEW

Promoting the production of new collagen and elastin fibres, HIFU increases these essential proteins for skin strength and elasticity.

### WRINKLE REDUCTION & DELAY THE AGEING PROCESS

The stimulation of new collagen restores the skin, creating a firmer, smoother, more lifted look, and a reduction in fine lines and wrinkles. Ideal for mild to moderately lax skin, HIFU lifts and tightens, rejuvenating the skin to promote and maintain a more youthful appearance for longer.
