

T-SHAPE

CELLULITE AND FAT REDUCTION THERAPY

HOW DOES T-SHAPE WORK?

T-Shape combines 3 innovative technologies to target cellulite and fat on a deeper level. Low level laser therapy reduces body volume in the treated area by targeting deep down to the fat tissue to form micropores in the fat cells. This causes fatty acids to be released and then flushed from the body via the natural metabolic processes. Radiofrequency waves cause skin tissues to heat up, making the collagen fibrils contract and thicken. This creates additional collagen to form in the skin tissue, firming and improving skin tone. Lastly, T-Shape's vacuum suction lifts and compresses the skin, stimulating blood circulation and eliminating toxins from the body. The 3 components of the T-Shape system can be used together or separately, depending on the treatment.

WHAT AREAS CAN BE IMPROVED WITH T-SHAPE?

This treatment offers amazing results for common areas affected by cellulite such as the thighs, hips, buttocks, arms and stomach. It can also be used on the face as an add-on to a facial to give skin cells a boost and promote collagen.

HOW MANY TREATMENTS ARE REQUIRED?

Results can be seen after the very first therapy session, however for T-Shape to have optimum effect, x8 1 hour treatments are required, occurring twice weekly.

WHAT WILL I EXPERIENCE DURING MY TREATMENT?

T-Shape is a comfortable and non-invasive therapy. Using the handheld device, your practitioner will work over your treatment area with the vacuum suction, offering a powerful relaxing and toning experience, similar to a massage. T-Shape requires no downtime and you can resume normal activities immediately.

B-TONIC

A NON-SURGICAL FAT REDUCTION BODY TREATMENT

HOW DOES B-TONIC WORK?

B-TONIC is a non-surgical fat reduction and muscle sculpting treatment which uses an innovative cosmetic technology that works on shaping targeted areas including; arms, thighs, abdomen and buttocks.

Once the therapist has set the machine, B-TONIC works completely independently. During each session, B-TONIC uses electromagnetic waves which induces 36,000 supermaximal contractions of muscles. When the targeted area is exposed to these contractions, the muscle tissue is forced to burn stubborn fat and sculpt muscles (hypertrophy).

Excessive and stubborn fat is a common problem among both men and women but thanks to the innovative technology, the B-TONIC simultaneously works on localised fat and tones muscles in just one 30 minute session, providing tangible results.

WHAT AREAS CAN BE IMPROVED WITH B-TONIC?

After a complete B-TONIC treatment of 6 sessions, which can act on stubborn fat pockets on the buttocks, thighs, arms and abdomen, clients see an average 4cm circumference reduction.

HOW MANY TREATMENTS ARE REQUIRED?

The effects of the B-TONIC are visible after a few sessions and last for up to 6 months - making it the ideal non-surgical fat reduction treatment. A complete B-TONIC treatment involves 6 sessions (two per week).

“B-TONIC visibly gave me body definition that I had been trying to achieving the gym for so long!”

SCIENTIFICALLY PROVEN RESULTS

Reduce body fat and tone muscles to achieve your ideal form with B-TONIC. A fast, pain-free non-surgical fat reduction and muscle building treatment.

**TRANSFORM YOUR BODY IN 6-8 TREATMENTS
WORKS ON LOCALISED FAT AND SCULPTS MUSCLES
PAIN FREE NO DOWNTIME**
